Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Several beaver dams between Little Willow Creek and
the Alaska Railroad create several deep pools. The channel
is deep + wide above railroad crossing with many ponds
and side channels. Above the railroad crossing is one Big marsh.
Survey ended because water was too deep in grass and prevented getting to main
channel.
Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
